OPTEX F R

Photoelectric Sensor Cylindrical Type

C SERIES

- ·CTD-1500□□
- ·CRD-300□□ ·CRDF-100□□
- ·CDD-11
- ·CDD-11

INSTRUCTION MANUAL

- Confirm if the item meets your needs
- Before the use, you should first thoroughly read this manual and operate correctly as mentioned.
- You should keep this manual at hand for proper use.

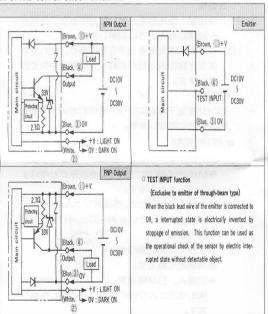

SPECIFICATIONS

	Through beam Retro-reflection type		Different selfention has		
	type		With polarizing filter	Diffused reflection type	
Item	CTD-1500(C) (N, P)	CRD-300(C) (N, P)	CROF-100(C) (N, P)	CDD-11(C) (N, P)	CDD-40(C) (N, P)
Detecting distance	15m	0.05~3m	0.05~lm	₩ licm	₩ 40cm
Supply voltage	DC 10~30V				
Current consumption	40mA max.	30mA max.			
Detecting object	Opaque 15mm min.	Opaque object 🗆 45mm min.		Transparent and opaque object.	
Response time	1.5ms max.				
Hysteresis	_			15% max. (at 11cm)	20% max. (at 40cm)
Light source	IR LED Red LED		IR LED		
Sensitivity adjustment	I rotation volume			1 rotation volume	
Indicator	Incident indicator (Red) Power indicator for Emitter				
Control output	NPN or PNP open collector 100 mA max. DC 30V				
Operation mode	LIGHT ON, DARK ON selectable by control cable				
Connection	Cable: PVC φ 5×2 m, 4×0.3 mm² Connector: M12×4 pins				
Noise resistance	1000 Vp, pulse width I µs (Noise simulator)				
Insulation resistor	20 MΩ min. (at DC 500 V)				
Ambient temperature humidity	-25~55°C (There should be no freezing)/35~85 % RH				
Environmental illuminance	Sunlight: 10000 lx max. Incandescent lamp: 3000 lx max.				
Vibration Shock resistance	Vibration: 10~55 Hz amplitude 1.5 mm X. Y. Z, each 2 hrs. Shock: 500 m/s² (50 G) X. Y. Z, each 3 times				
Protection category,	IP 66 (IEC 144) Case : BSBM Lens : PC (PMMA for polarizing filter type)				

₩ □ 20cm white paper

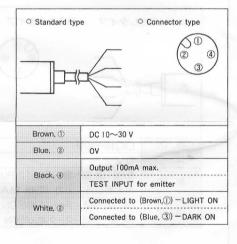

Mode	LIGHT ON	DARK ON	
Operation	(ON at incident)	(ON at interruption)	
Operation status	Interruption		
Incident indicator (red)	ON OFF	1-07-3- (3-03) -	
Transistor output	ON OFF	AAA	
Load	Operation Release		

INPUT AND OUTPUT CIRCUIT DIAGRAMS

HOW TO USE

Connection diagram

Adjusting the optical axis.

O Through-beam type

- Install the emitter and the receiver opposite to each other so that the optical axis lines up.
- Swing the emitter and the receiver vertically and from side to side, and fix each at the mid-point in the range where the indicating lamp at the receiver lights up.

O Reflection type

Swing the sensor vertically and from side to side, and fix it at the mid-point in the range where the indicating lamp lights up.

Adjusting the sensitivity control

- I. Set the detectable object at the detection position and turn the sensitivity control slowly from MIN toward MAX untill the indicating lamp lights up. Call it position A.
- 2. Remove detectable object and turn the sensitivity control from MAX toward MIN position where the indicating lamp is extinguished. Call it position B.
- 3. Point C midway between A and B is the optimum sensitivity posi-

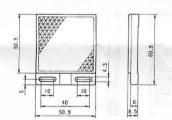

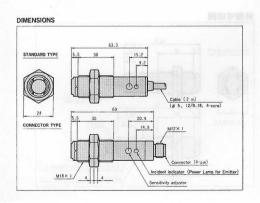

Other precautions

- Be careful not to install the sensor at the following locations, for it may otherwise malfunction:
- Where a lot of dust, vapor, or the like is present
- Where corrosive gases are produced
- Where water, oil or the like flies directly onto the sensor.
- Where strong vibration or shock is caused to the sensor.
- Do not use organic solvent, such as thinner, to remove contaminants from the lens, which are all of plastics. Using a dry rag, just wipe clean.
- When a switching regulator is to be used with a power supply, be sure to ground the frame ground (F. G.) terminal.
- Do not use the sensor in a transient state at a turn-on (about 40 ms).

Accessories

O Reflection mirror (for Retro-reflection type)

- Specifications and equipment are subject to change without any obligations on the part of manufacture.
- For more information, questions and comments regarding products, please contact us below.
